In the Claims:

No claims were amended herein. The claims and their status are shown below.

1-32. (Canceled)

- 33. (Previously presented) A transgenic plant containing a nucleic acid construct comprising a polynucleotide that encodes a polypeptide having at least 95% sequence identity to SEO ID NO:2, wherein said polypeptide possesses β-ketoacyl synthase activity.
- 34. (Previously presented) The plant of claim 33, wherein expression of said nucleic acid is tissue-specific.
- 35. (Previously presented) The plant of claim 34, wherein said expression is epidermal cell-specific expression.
- 36. (Previously presented) The plant of claim 34, wherein said expression is seed-specific expression.
- 37. (Previously presented) The plant of claim 33, wherein said plant has altered levels of very long chain fatty acids in seeds compared to the levels in a plant lacking expression of said nucleic acid.
 - 38-39. (Cancelled)
- 40. (Previously presented) A method of altering the levels of very long chain fatty acids in a plant, comprising the step of:

introducing a nucleic acid construct into a plant, wherein said nucleic acid construct comprises a polynucleotide that encodes a polypeptide having at least 95% sequence identity to SEQ ID NO:2, wherein said polypeptide possesses β-ketoacyl synthase activity, wherein said construct is expressed and wherein said polypeptide is effective for altering the levels of very long chain fatty acids in said plant.

- 41. (Previously presented) The plant of claim 33, wherein said construct further comprises a regulatory element operably linked to said polynucleotide.
- 42. (Previously presented) The plant of claim 41, wherein said regulatory element is a tissue-specific promoter.
- 43. (Previously presented) The plant of claim 42, wherein said regulatory element is an epidermal cell-specific promoter.

44. (Previously presented) The plant of claim 42, wherein said regulatory element is a seed-specific promoter that is operably linked in sense orientation to said polynucleotide.

- 45. (Previously presented) The method of claim 40, wherein expression of said nucleic acid is tissue-specific.
- 46. (Previously presented) The method of claim 45, wherein said expression is epidermal cell-specific expression.
- 47. (Previously presented) The method of claim 45, wherein said expression is seed-specific expression.
- 48. (Previously presented) The method of claim 40, wherein said construct further comprises a regulatory element operably linked to said polynucleotide.
- 49. (Previously presented) The method of claim 48, wherein said regulatory element is a tissue-specific promoter.
- 50. (Previously presented) The method of claim 49, wherein said regulatory element is an epidermal cell-specific promoter.
- 51. (Previously presented) The method of claim 49, wherein said regulatory element is a seed-specific promoter that is operably linked in sense orientation to said polynucleotide.
